

## **Accent Refrigeration Systems Wins Advanced Technology Award For Environmental Excellence**

On May 22<sup>nd</sup> 2009 the Victoria Conference Center was resonating with optimism as over 500 high technology companies were on hand to honor its brightest stars at the popular annual VIATEC awards banquet and gala. Over 40 companies were nominated for the prestigious award and when all of the votes were counted, Accent Refrigeration Systems were presented the highest honors for Environmental Excellence as a result of their unwavering dedication to the environment and energy efficient innovations that they have deployed around the world.

For two decades Accent Refrigeration Systems have been evangelists for the importance of environmental stewardship. Their mechanical systems are widely regarded as the most efficient in the industry and as a result, have been installed in areas spanning the globe. On many

occasions, Accent Refrigeration Systems have chosen not to participate in projects because they have not met their triple bottom line standards of being environmentally friendly, socially responsible and economically sound.

During the awards ceremony the audience was treated to a very impressive video highlighting a number of their recent international projects that included

advanced computer control systems and one of their futuristic District Energy Sharing Systems where ice rinks were integrated within the community in such a manner that the facilities were actually generating revenue with their waste heat.

In addition to designing and manufacturing leading edge refrigeration systems, Accent's management team can be regularly found preaching the word of the environment at Universities, Technical Schools, and Regional and National Conventions on just about every continent.

When Accent Refrigeration Systems were announced as this year's winner, the packed house erupted in applause and waved their Victory Towels in celebration for the very popular company.
